*Erythronium Revolutum var. Johnsonii .....	.50	1.50	4.50
Incarvillea Grandiflora Brevipes .....	.50	1.50	4.50
*Scilla Peruviana .....	.50	1.25	3.75
* Slow germinating seed			

## LILIES FROM SEED

Many lilies may be successfully grown from seed sown outdoors in well prepared beds. However, it is quicker and easier, especially with small lots, if the seed is sown in flats or ground beds in a cool greenhouse or frame. The easy germinating species are best sown in early spring and the slower kinds in the summer or early fall for germination the following spring. These slower sorts require a period of warmth followed by a period of cold before top growth will appear. Provide shade during the summer by the use of lath covers which may replace the cold sash frame during the summer months. One-half inch is sufficiently deep to sow the seed when protection is offered from heavy rains.

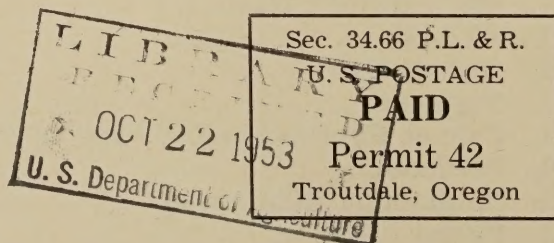

Seedlings of the easy kind are best transplanted into nursery rows the spring following germination while those of the slow germinators should remain in the seed bed two years before transplanting. Seedlings may also be grown on in pots or plant bands in a greenhouse or frame. This method is desirable when handling the more tender sorts or those which due to their rarity, should be given special attention. A light mulch of peat moss spread over the seed bed after germination will assist in keeping the soil surface evenly moist. Use care in transplanting so that the delicate young roots are not broken.

Terms: 2% for Cash with order  
or 2% — 10 days. 30 days net for established accounts.

Size of packets varies with the rarity of the species. Some varieties of seed are available in pound lots—prices upon application. Seed orders are accepted subject to crop, stock on hand, and safe arrival of imported seed.

All seed prices include postage in U.S. and Canada. Foreign or Air Mail postage extra.
